

## After care for IPL-Vascular & Pigmented Lesions

- Apply moisturizer and sun blockers with UVA/UVB protection daily.
- Avoid sun exposure in between and be mindful of exposure after treatments.
- Everyone heals at a different rate; therefore, downtime varies. Expect area to first appear slightly red, then start to look scaly and pigmentation will flake off.
- \*Remember if sun blockers are not applied daily the area will begin to darken over time.
- Within 3 weeks after the treatment patient should return for examination of the treatment site and for additional treatment, if necessary.
- Treatments are recommended every 3-4 weeks for 3-6 treatments. Treatment is complete when satisfactory results are obtained.
